

STRIPMASTER

Experience the amazing results of orbital stripping.

Economical, new 20" propane driven orbital stripping machine provides the kind of high speed results usually found only in much larger, more expensive propane stripping machines.

The compact design of the **STRIPMASTER** means great maneuverability on the job and easy portability to the next one. It's ideal for smaller facilities, narrow aisles, rest rooms, class rooms, convenience stores, restaurants, lunch rooms, check-out aisles, and meat preparation and bakery areas in supermarkets. Use it as a high speed edger on bigger jobs.

If you have used an orbital sander and compared its effectiveness to a rotational sander you already understand why orbital stripping is so effective. The brush seems to vibrate right into the finish. The strip solution is not flung away from the area being stripped. It stays under the brush and is driven into the finish. You will be amazed at how much punch this small machine packs and how little it costs!

- More aggressive scrubbing action
- Ends solution splash and slinging
- Eliminates side torque
- Strips right up to the baseboard – no edging
- Offset design reaches under gondolas
- Great for scrubbing grouted surfaces and concrete floors

SPECIFICATIONS

13hp Honda engine
Centrifugal Clutch
145# Head Pressure
20" Strata-grit Plus Brush
Dimensions: 22"W • 42"L • 28"H
Weight: 230 lbs.

Patent Pending
